

HIPAA Education

Designer Security Presents Annual Security Refresher

People are a critical component of effective cybersecurity in audiology. As technology and cyber threats continue to evolve, continuing education is essential for providers and staff alike to help protect patients, the practice, and themselves from risk. The HIPAA Security Rule also requires a security awareness and training program for all members of the workforce and this course can help fulfill your requirement.

Our **Annual Security Refresher** course is tailored to the needs of audiologists and staff. This live, one-hour, video teleconference covers best practices against the most relevant and contemporary cyber threats. We assume that attendees are already familiar with basic HIPAA concepts. The course is continually updated and always includes:

- Data protected under HIPAA
- Top cyber threats to healthcare
- Identifying malicious emails and websites
- How to securely move electronic PHI
- How to encrypt laptops, phones, and cloud
- Best practices for access control and passwords
- Dos and do-not's for smartphones
- Privacy safeguards
- How to build and sustain a culture of security
- Online resources for trustworthy information
- Time for individual and practice-specific questions

The **Annual Security Refresher** is different from other HIPAA training. While some websites offer free online training, these courses are often dry and generic, and almost never include practical advice for addressing real world scenarios in audiology. This course is taught by a cybersecurity expert who has tailored the course to your needs and can answer your questions during the course. This engaging approach makes the training more effective and memorable so that information is understood, remembered, and followed.

Comparison between Other Trainings and Designer Security

	Free Trainings	Designer Security
Current HIPAA Laws (last updated 2013)	✓	✓
Covers Privacy Rule, Security Rule, Breach Notification Rule	✓	✓
Motivates and educates about <i>why</i> HIPAA matters		✓
